1. Title Page

- Title:- Bank Account Simulation
- Team Members:- Nishank Jain 1262250267
  Sadhavi Dhadve 1262252509
  Prakhar Joshi 1262251232
  Sandeep Chaudhary 1262251638
  Ridhima Khandelwal 1262251371
- Project Guide:- Dr. Renuka Amit Mane
- Institution Name: MIT World Peace University
- Submission Date :

- Individual task :

Nishank Jain **(Account & Security Module)**	implemented secure account creation and login with OTP and PIN protection. • Account creation (createAccount()) • Login system (login()) • OTP verification (generateOTP(), verifyOTP()) • PIN system (inputHidden(), changePIN())
Prakhar Joshi **(Smart Features)**	developed intelligent features like chatbot, financial analysis, and user behavior tracking. • Chatbot (smartChatbot()) • Financial Mirror (financialMirror()) • Karma system (loadKarma(), saveKarma(), showKarma()) • Transaction explanation (explainLastTransaction())

Sandeep Chaudhary **(File Handling & Data Management)**	implemented file handling to store user data and transaction history permanently. • Save & load user (saveUser(), loadUser()) • File structure (user, history, inbox files) • Transaction logging (logTxn())
Sadhavi Dhadve **(Transaction Module)**	handled all banking transactions like deposit, withdraw and fund transfer with validation. • Deposit & Withdraw logic • Transfer system (transferMoney()) • Minimum balance rule (applyMinBalanceRule())
Ridhima Khandelwal **(Admin & Security Control)**	implemented admin controls including fraud detection, account blocking, and system security. • Admin panel (adminPanel()) • Block/unblock account • Fraud detection (adminFraudRadar()) • Global freeze system (toggleGlobalFreeze())

---

2. Acknowledgment

I would like to express my sincere gratitude to our project guide for their valuable guidance and support throughout the completion of this project. Their insights helped us understand the concepts of programming more effectively.

I also thank my teammates for their cooperation and dedication. Lastly, I am grateful to our institution for providing the necessary resources and environment to complete this project successfully.

---

3. Abstract

This project presents an **Bank Account Management System** developed using the C programming language. The system simulates real-world banking operations such as account creation, deposits, withdrawals, fund transfers, and transaction tracking.

The system also includes **modern intelligent features** like:

- Financial behavior tracking (Karma System)
- Fraud detection (Fraud Radar)
- Secure login with PIN and OTP
- Admin control panel
- Smart chatbot assistant

The project demonstrates the use of **file handling, structures, modular programming, and security concepts**. It provides a realistic banking simulation with a user-friendly menu-driven interface.

5. List of Figures and Tables

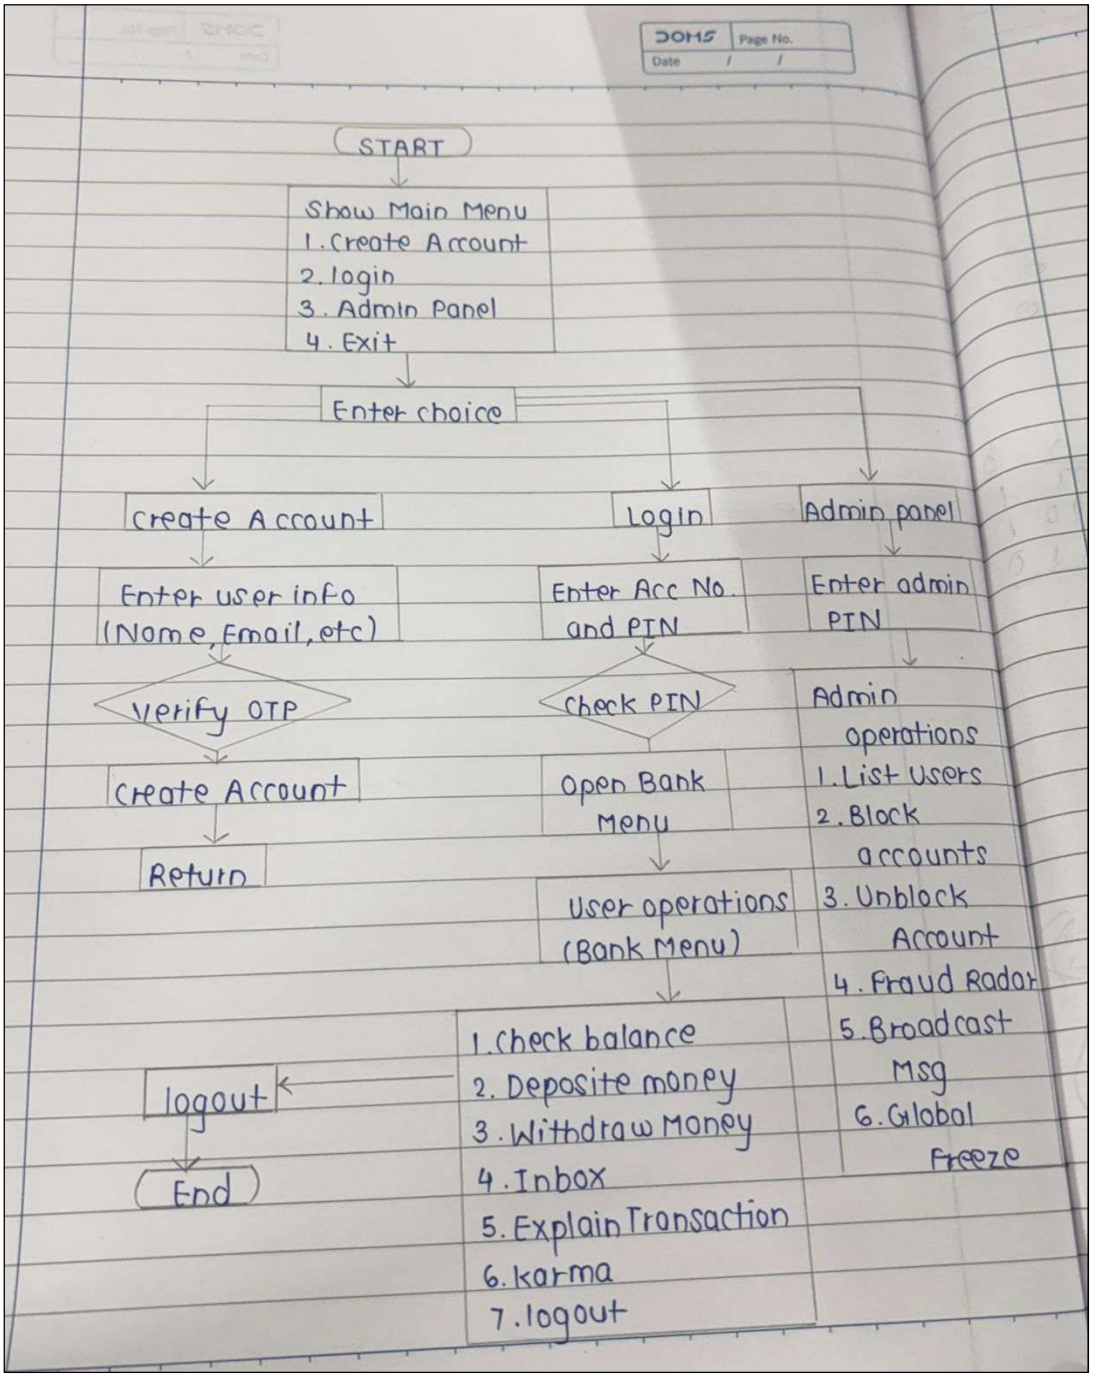
- Figure :



Sr.no	System Name	Technology Used	Features	Limitations	Performance
1.	Traditional Banking System	Manual / Paper-based	Record keeping, transactions	Time-consuming, error-prone	Low
2.	ATM System	Embedded Systems	Cash withdrawal, balance check	Limited features, no data analytics	Medium
3.	Online Banking System	Web Applications	Fund transfer, account management	Security risks, requires internet	High
4.	Mobile Banking Apps	Android/iOS Apps	Easy access, notifications, payments	Device dependency, security concerns	High
5.	Basic C-based Systems	C Programming	Simple data handling, file storage	No GUI, limited scalability	Medium

---

6. Introduction

Problem Statement

Bank management simulation

Background

Modern banking systems use automation and intelligent analysis. This project replicates these features using **C programming**, making it suitable for learning system design and real-world applications.

Objectives

- To develop a bank account simulation system
- To implement secure login and transactions
- To use file handling for data storage
- To simulate real banking features like fraud detection and analytics
- To build a menu-driven interactive system

---

7. Literature Review

Sr No	System Name	Technology Used	Features	Limitations
1	Traditional Banking	Manual	Record keeping	Time-consuming, error-prone
2	ATM System	Embedded Systems	Cash withdrawal, balance check	Limited features
3	Online Banking	Web Applications	Fund transfer, account management	Security risks
4	Mobile Banking	Mobile Apps	Notifications, payments	Device dependency
5	C-Based System	C Programming	File handling, simple operations	No GUI, limited scalability

Summary:

Most systems use databases, but for beginners, file handling in C is simpler and effective.

---

8. System Design/Methodology

Modules

1. Account Creation & Login
2. Deposit & Withdraw
3. Fund Transfer
4. Transaction History
5. Inbox Notification System
6. Karma System (Financial Behavior Tracking)
7. Fraud Detection System
8. Admin Panel
9. Smart Chatbot
10. Financial Mirror Analysis

Algorithm

```
Start
Initialize system

Display main menu
Input choice

IF Create Account THEN
   Take user details
   Verify OTP
   Generate account and save data
ELSE IF Login THEN
   Verify account and PIN
   Display user menu
   Perform operations (deposit, withdraw, transfer, etc.)
ELSE IF Admin Panel THEN
   Verify admin PIN
   Manage users (block/unblock, fraud check, etc.)
ELSE IF Exit THEN
```

```
    Stop program
END IF

Repeat until Exit
Stop
```

---

9. Implementation

Tools Used

- Language: C
- Compiler: GCC / Turbo C
- Concepts Used:
    - Structures
    - File Handling
    - Functions
    - Conditional Statements

Sample Code

```
typedef struct {
    int accNo;
    char name[50];
    char email[50];
    char phone[15];
    int pin;
    float balance;
    int depositCount;
    int withdrawCount;
} User;
```

Key Features Implemented

- Secure login with PIN

- OTP verification
- Money transfer system
- Transaction logging
- Admin control panel
- Fraud detection (withdraw pattern analysis)
- Karma-based financial tracking
- AI-like chatbot assistant

Testing Methods:

- Checked valid and invalid inputs
- Verified file storage and retrieval
- Tested all menu operations
- Ensured security features like PIN and OTP

---

10. Results and Discussion

Output

1. Account creation successful
2. Deposits and withdrawals processed
3. Transactions stored in files
4. Fraud detection working
5. Admin controls functioning

Analysis

The system successfully simulates a real banking environment and demonstrates efficient data handling using file systems.

---

11. Test Cases

1. Chatbot(smartchatbot)

```
🤖 ChatBot: Hello! How can I help you?
You: balance
🤖 Chatbot: Your current balance is ₹1,500.00

You: karma
🤖 Chatbot: You have 8 karma points.

You: history
🤖 Chatbot: Showing your last 3 transactions...

Press any key to continue . . . .
```

2.Last transaction()

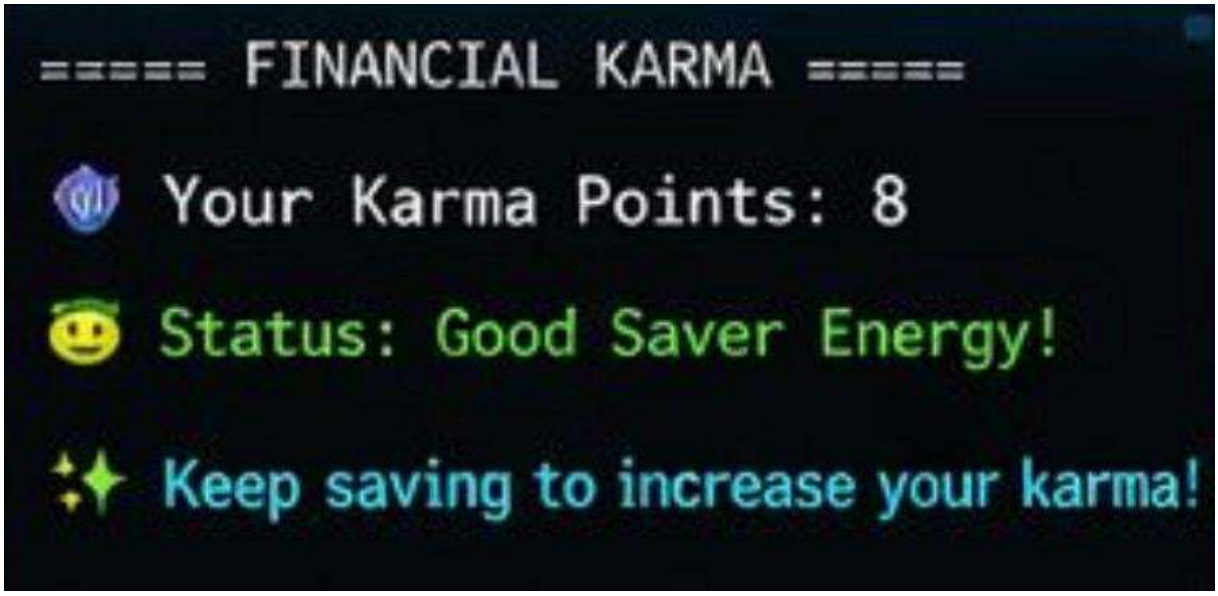
```
Figure 12: LAST TRANSACTION =====
Account Number : 1001
Date     : 02-03-2026
Transaction   : Debit  ₹500.00  Acc.No: 1002
Description   : Money transferred
```

3.Financial mirror()

```
===== 🪞 FINANCIAL MIRROR (Last 7 Days) =====

💵 Total Deposited  : ₹2,000
💸 Total Withdrew   : ₹1,500
----------------------------
✅ Mirror Status: Good saving habit! 😊
```

4. karma()



12.Conclusion

The project successfully implements a **realistic bank account management system** using C programming. It includes advanced features like security, analytics, and intelligent assistance, making it more powerful than basic systems.

13.Future Scope

- Add **Graphical User Interface (GUI)**
- Convert into **Web Application**
- Integrate **Database (MySQL)**
- Add **Mobile App version**
- Implement **Real AI-based fraud detection**

14.Research Paper/Patent Details

No research paper published.

(No patent filed)

15.Plagiarism Check

The report is original and plagiarism is below 10%..
